Test Scenarios for User Registration_E-Commerce Application

Scenario ID	Scenario Name	Scenario Description	Preconditions	Expected Outcome
TS_01	Register New User Account Successfully	Given the user is on the User Registration page. When the user enters valid mandatory information and selects the Register button. Then the application should create a new user account successfully. And a verification email or OTP should be sent to the registered contact details.	Given the Registration page is accessible. And the email address and mobile number are not already registered.	The account is created successfully. A confirmation message is displayed, and a verification email or OTP is sent to the registered email address or mobile number.

TS_02	Validate Mandatory Registration Fields	Given the Registration page is displayed. When the user submits the registration form without entering one or more mandatory fields. Then the application should identify the missing fields and display appropriate validation messages.	Given the Registration page is available. And the user has not completed all required fields.	Registration is not completed, and validation messages are displayed for each mandatory field left blank.
TS_03	Validate Existing Email Registration	Given an account already exists with the entered email address. When the user attempts to register using the same email address. Then the application should reject the registration request and display a duplicate email message.	Given the Registration page is available. And the entered email address is already registered in the application.	Registration is prevented, and the message " An account with this email already exists. " is displayed.
TS_04	Validate Incorrect Email Format	Given the Registration page is open. When the user enters an email address in an invalid format and clicks the Register button. Then the application should display an email format validation message.	Given the Registration page is accessible. And the email entered does not follow a valid email format.	Registration is not completed, and the message " Please enter a valid email address. " is displayed.

TS_05	Validate Password Policy Compliance	Given the Registration page is displayed. When the user enters a password that does not satisfy the password policy and submits the registration form. Then the application should display the password policy requirements.	Given the Registration page is available. And the entered password does not satisfy the defined password policy.	Registration is not completed, and the password policy requirements are displayed to the user.
